Desktop AI for document processing

A desktop workstation powered by NVIDIA GB10 and Verixa IDP can process purchase orders, invoices and delivery notes in the company’s own environment.

Annual software and service fee

The annual fee covers IDP software and technical support. Workstation hardware is quoted separately. Contact sales for pricing in your region.

What the year covers

One year of core IDP licensing, an activation guide, one training session and one year of first-line remote technical support. A three-month trial of Foxit Web PDF Editor is included. AI Workspace is a separate enterprise offering and is not included.

From document to usable data

IDP extracts fields and line items. Staff check the results against the original document and export reviewed data to Excel, CSV or JSON. API integration with ERP or CRM can be evaluated for your workflow.

Choosing the hardware

The desktop system uses NVIDIA GB10 with 128 GB of unified memory. Discuss document volumes, the hardware model, availability and delivery separately when requesting your quotation.
