Verixa

DRAFT · v01

DELIVERY DOCUMENTS / SOLUTION SHEET

Put delivery details to work Reduce manual updates

When delivery notes arrive as PDFs or scanned documents, teams still copy references and quantities into operational records. Verixa uses AI-powered document processing to extract the data, support review and prepare it for your logistics or ERP system.

FROM A DELIVERY NOTE TO OPERATIONAL DATA

DELIVERY NOTE / PDF OR SCAN

DN-3062

Order reference: PO-1048

Item	Qty
Valve assembly	120

FIELDS READY FOR REVIEW

Delivery no.	**DN-3062**
Order ref.	**PO-1048**
Line item	**Valve assembly**
Quantity	**120**

Illustrative data, not a product screenshot or measured customer result.

HOW VERIXA FITS YOUR DELIVERY DOCUMENT PROCESS

01 CAPTURE

Define delivery references, dates, recipients, items and quantities to capture. Verixa extracts the values from your documents.

02 CHECK & REVIEW

Flag missing or suspect values with configured checks. Review them against the delivery note, correct the data and approve as configured.

03 HAND OFF

Map reviewed delivery data to the agreed fields in your logistics or ERP system, reducing manual entry into operational records.

CONFIGURED FOR YOUR PROCESS

Agree the document types, fields, review rules and system connection for your project. Order matching, delivery-status updates and archiving are separate scope items.

Try your own delivery documents

Bring: representative delivery notes, required fields, your target system and a reviewer.

Measure: field and line-item correctness, manual correction effort and handling time against your current process.

Ask your provider for a demo or sample evaluation. Agree scope, data handling and fees first.
